

Write the process.

Save the Skill.

01 Open Codex. Choose a folder.

Open the desktop app and choose Codex. Create a folder called **Museum Skill Lab**, select it as your local project, and start a new task.

02 Tell AI the method. Ask it to save it.

Copy this complete prompt. Codex will create and save the Skill for you. Approve the requested folder access if prompted.

PROMPT 01 / YOU TO CODEX

Create and save a reusable Skill named museum-graphic-design-case-study. It should research any museum I name and produce a two-page graphic design case study using this procedure:

1. Research the museum's visual identity, logo, typography, color, grid, image language and information hierarchy. Search its official website, exhibition pages and press materials, plus the official websites of credited designers or studios. Collect relevant images and record the source URLs.
2. Compare the graphic design across its website, posters, publications and signage where evidence is available. Analyze repeated choices and differences. Describe visible details and explain how they organize information. Separate sourced facts from your observations; do not invent missing details.
3. Create an English PDF of exactly two A4 portrait pages. Page 1: a short introduction and visual identity analysis, with two images - one large main image above, one smaller detail below beside the text. Page 2: three application images in a row, with captions, followed by a comparative analysis and a short conclusion. Include readable source links and image credits within these two pages. If suitable images are missing, ask me for them.
4. Use Swiss Design: a six-column grid, white background, black sans-serif type, restrained red highlights, large headings, generous white space and square corners. Keep the writing descriptive and specific. Avoid generic praise and phrases such as "not only ... but also" or "rather than". Check both pages for overlap and clipping before delivering the PDF.

Turn this procedure into a Skill and save it in the appropriate personal Skills folder for this Codex installation. Confirm its name and saved location. Ask before replacing an existing Skill. Create the Skill now; wait for my next prompt to research a museum.

Copy the message above into Codex, then send.

Once Codex confirms the Skill is saved, continue with the second prompt.

Call the Skill.

Make the report.

03 Now give it a museum.

The procedure is already saved. Send this message in the same task.

PROMPT 02 / YOU TO CODEX

Use my saved Skill museum-graphic-design-case-study to research the Montreal Museum of Fine Arts.

Start with <https://www.mbam.qc.ca/en/> and follow the Skill's research, comparison, writing and layout instructions. Generate the two-page PDF, save it in my selected folder and give me the file to open.

Copy the message above into Codex, then send.

Codex follows the saved method and creates the PDF. Open the result and review the two pages.

03

2 images + identity analysis

3 images + comparative analysis

Same Skill. New museum.

Next time, change the museum name and official website in Prompt 2.
